DEVELOPMENT EDITION / DESIGN PROTOTYPE

The Teacher AI Toolkit

300 copy-ready prompts and 12 connected workflows for K-12 teachers

PLAN / ADAPT / VERIFY

A practical planning library built around visible inputs, precise outputs and teacher judgement.

Prototype v1 - not a final product or teaching-quality certification

CHAPTER 01 / 60 PROMPTS

Lesson Planning

01

Move from a supplied standard and a real classroom constraint to a draft a teacher can inspect at a glance.

- 12 Complete lessons
- 08 Backward unit planning
- 08 Standards and objectives
- 08 Warm-ups and exit tickets
- 06 Pacing and transitions
- 06 Substitute plans
- 06 Projects
- 06 Reflection and adaptation

CHAPTER RULE

Every plan must reconcile total time, available materials, supplied standards and observable evidence of learning.

LP-001 / COMPLETE LESSONS

A full lesson from one standard

GRADES 3-12 **ANY SUBJECT** **10-60 MIN** **COPY ONLINE**

USE THIS WHEN

You have the required standard text and need a complete, reviewable first draft.

TEACHER INPUTS

`[GRADE]`
`[MINUTES]`
`[TOPIC]`
`[STANDARD TEXT]`

COPY-PASTE PROMPT

```
You are an experienced [GRADE] teacher planning a
[MINUTES]-minute lesson on [TOPIC].

Use this supplied standard text exactly as written:
[SUPPLIED STANDARD TEXT]

Create: (1) a student-facing objective, (2) a warm-up,
(3) explicit teacher modelling, (4) guided practice with
observable checks, (5) independent practice, (6) one
diagnostic exit ticket, and (7) the most likely
misconception with a question that exposes it.

Use only [AVAILABLE MATERIALS]. Keep the total timing
within [MINUTES] minutes. Do not invent standards,
student facts, materials, dates or evidence. For
science, distinguish a possible effect from a certain
effect. Finish with a constraint self-check.
```

VERIFY BEFORE USE

- [ ] All facts were supplied
- [ ] Answer/content is correct
- [ ] Timing totals correctly
- [ ] Materials are available
- [ ] Difficulty fits the class
- [ ] No private student data
- [ ] School policy is followed

PRIVACY

Use fictional tests. Initials are not anonymization.

ILLUSTRATIVE DRAFT / NOT TEACHER-APPROVED

A sample demonstrates format, not classroom effectiveness or factual certification.

What a reviewed example should show

GRADE 6 SCIENCE / PHOTOSYNTHESIS

OBJECTIVE

I can model how light energy, water and carbon dioxide contribute to sugar production and oxygen release.

WARM-UP / 5 MIN

Students record what a plant takes in and releases. Preserve responses before correction.

GUIDED CHECK

Ask students to distinguish sunlight as energy from matter entering the plant.

EXIT TICKET

Can a watered plant make sugar without light? Explain which required input is missing.

MISCONCEPTION CHECK

Most carbon in a plant's dry mass comes from carbon dioxide, not directly from soil.

EDITORIAL REVIEW

- **PASS** Objective matches the supplied standard.
- **PASS** The lesson distinguishes energy and matter.
- **FIX** Do not say total tree mass simply comes from air; specify dry-mass carbon.
- **CHECK** Confirm all activity minutes plus transitions fit the period.
- **CHECK** Replace unavailable materials or retain them as inputs.

Review applies only to this content version.

From supplied standard to lesson pack

Each stage consumes the actual verified output above it. A failed or incomplete stage stops the chain.

01

PLAN

Create the lesson skeleton from the supplied standard and constraints.

02

ADAPT

Use the verified plan to create scaffolded, on-level and extension access.

03

ASSESS

Use the verified lesson to draft an aligned check and answer key.

04

PACKAGE

Assemble teacher notes, student pages and the final verification list.

HUMAN GATE Verify facts, answer keys, privacy, accessibility and local policy before classroom use.
