

25 AI Planning Prompts for Teachers

A free development preview: adapt, review and try one classroom task.

Includes three editorial examples using fictional data. These are illustrations, not recorded API outputs or validated classroom results.

Start with one task

Choose one prompt. Fill in task details using fictional or non-identifying material. Use only an authorized AI service. Check the result and correct it before use. Record whether it helped; no fixed time saving is promised.

For chained workflows, paste the previous reviewed output into the next step. Do not assume a new chat remembers another conversation.

Contents

[Planning](#) | [Report cards](#) | [Parent emails](#) | [Differentiation](#) | [Assessment](#) | [Worksheets](#) | [Time & admin](#)

Before you start. These prompts are planning aids. They do not replace your professional judgement, your school's policies, or any legally required process. Review everything before it reaches a student, a family, or a permanent record. Use fictional demonstration data only. Initials are not anonymization. Do not upload identifiable student records, grades, behaviour notes or IEPs to unapproved tools. Follow district policies and use only authorized services. Use only materials you have permission to reproduce. AI must not invent facts about students, standards or evidence. This is not a compliance certification.

Planning

5 prompts

1. A full lesson plan from one standard

K-2 · 3-5 · 6-8 · 9-12

Supply standard text and lesson duration to create a plan for review.

The prompt

You are an experienced [GRADE] teacher planning a [MINUTES]-minute lesson on [TOPIC], aligned to [SUPPLIED STANDARD TEXT].

Write the full plan with these sections and nothing else:

1. Learning objective, in student-facing "I can" language
2. Warm-up (3-5 min) that surfaces prior knowledge
3. Mini-lesson with the exact steps I model, in order
4. Guided practice, including what I circulate and look for
5. Independent practice
6. Exit ticket — one question that would actually reveal who did not get it
7. The single most common misconception on this topic, and the exact question I ask to catch it

Keep every section short enough to read at a glance while teaching. No introduction, no summary.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

2. A substitute plan for an unexpected absence

All grades

You are sick at 6am. This writes a plan a stranger can teach.

The prompt

Write a substitute teacher plan for [GRADE] [SUBJECT] for [NUMBER] periods.

Assume the sub knows nothing about my class and may not know the subject. The work must be meaningful, not busywork, and must need no preparation or special materials.

Include:

- A 3-line "what this class is like" note
- Minute-by-minute timing for each period
- Exactly what to write on the board
- The task itself, written out in full so it can be photocopied
- What to do if students finish early
- What to leave me a note about

Write it as one page the sub can follow top to bottom.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

3. A week of bell ringers

3-5 · 6-8 · 9-12

Five warm-ups that spiral back to what they keep forgetting.

The prompt

Create 5 bell ringers (one per day) for [GRADE] [SUBJECT], each taking under 5 minutes.

They must spiral: Monday and Tuesday review [TOPIC THEY KEEP FORGETTING], Wednesday and Thursday preview [THIS WEEK'S TOPIC], Friday mixes both.

For each day give me: the question exactly as students will see it, the answer, and one sentence on what a wrong answer tells me.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

4. Unit skeleton from an end goal

6-8 · 9-12

Work backwards from the assessment instead of forwards from day one.

The prompt

I am planning a [NUMBER]-week unit on [TOPIC] for [GRADE]. The unit ends with [FINAL ASSESSMENT].

Work backwards. Give me:

- The 4-6 things students must be able to do to succeed on that assessment
- Those skills sequenced across the weeks, with a reason for the order
- One checkpoint per week that tells me who is off track early
- The two lessons in this unit most likely to go wrong, and why

Table format, one row per week.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

5. Turn a textbook chapter into a lesson

6-8 · 9-12

The book has the content. It does not have a lesson.

The prompt

Below is a passage I have permission to reproduce for [GRADE] [SUBJECT]. Turn it into a [MINUTES]-minute lesson that does not involve reading it aloud.

Give me: a hook that creates a question the text answers, the 3 ideas worth keeping (and what to cut), an activity that makes students use the ideas rather than restate them, and an exit ticket.

TEXT:

[PASTE THE SECTION HERE]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Report cards

3 prompts

6. Batch report card drafts from fictional notes

All grades

Draft comments from supplied fictional observations; verify before adapting.

The prompt

I am writing report card comments for [GRADE] [SUBJECT].

Below is my class list as "Fictional student label | example grade | supplied evidence". For each student write a comment of [NUMBER] sentences that:

- opens with a specific strength, not a generic compliment
- names one concrete next step the student can act on
- is written to be read by a parent, warm but honest
- never compares one student to another

Vary the sentence openings — comments that all start the same way read as copy-paste.

CLASS LIST:

Student A | B+ | strong writer, rushes edits

Student B | C | participates, struggles with multi-step problems

[ADD FICTIONAL EXAMPLES ONLY]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Fictional example input

Write two sentences per fictional learner using only these supplied notes. Do not infer gender or add observations. Student A: strong writer, rushes edits. Student B: participates, struggles with multi-step problems.

Illustrative draft - not a recorded API execution

Student A

Student A shows strength in writing. A useful next step is to allow time for checking and revising each draft.

Student B

Student B participates in class. A useful next step is to write down and check each stage of a multi-step problem.

Teacher check: Replace general wording with verified classroom evidence locally; do not add evidence that was never observed.

7. Rewrite a blunt comment

All grades

You know what you mean. This makes it survivable for a parent.

The prompt

Rewrite the report card comment below so it is honest but not deflating for a parent to read.

Keep every fact. Do not soften it into meaninglessness — the parent must still understand there is a problem and what to do about it. Give me three versions: gentle, direct, and firm.

COMMENT:

[PASTE YOUR DRAFT]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

8. A comment bank you can reuse all year

All grades

Build it once in January, use it every term after.

The prompt

Build a report card comment bank for [GRADE] [SUBJECT].

Give me 6 comments for each of these bands: excelling, secure, approaching, struggling, and inconsistent effort.

Each comment must have a blank [FICTIONAL LABEL] and one blank [SPECIFIC EXAMPLE] so I can drop in something real. Vary the openings across the bank. Group them under headings.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Parent emails

4 prompts

9. The email you have been putting off

All grades

A concern email that does not turn into a meeting about your tone.

The prompt

Write an email to a parent about a concern.

Concern: [WHAT IS HAPPENING]

What I have already tried: [WHAT YOU TRIED]

What I want from this email: [A MEETING / AWARENESS / SUPPORT AT HOME]

Rules: open with something genuine and specific about the child. State the concern in plain terms without jargon or diagnosis language. Describe behaviour, never character. End with one clear ask. Under 200 words. No emoji.

Then give me a shorter version for a parent who does not read long emails.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Fictional example input

Draft an email using this fictional scenario only: Student A asks questions during discussions. Three practice assignments are missing. I supplied paper copies and gave reminders. Ask the family for a short conversation to learn whether there are barriers. Do not invent reasons or pronouns.

Illustrative draft - not a recorded API execution

Subject: Checking in about practice assignments

Hello,

Student A asks questions during class discussions. I wanted to check in because three practice assignments are missing. I have provided paper copies and reminders.

Could we arrange a short conversation to understand whether any barriers are making these assignments difficult to complete? We can agree on a manageable next step together.

Thank you.

Teacher check: This is fictional. Confirm every observation before adapting it locally, and add contact details outside the AI tool.

10. Positive notes home, ten at a time

All grades

Draft positive notes using only the observations supplied.

The prompt

Write 10 short positive notes home for [GRADE], one per student, based on the notes below.

Each must be 2-3 sentences, name something specific (not "a pleasure to teach"), and sound like a real person wrote it. Vary the structure so they do not read as a template.

STUDENTS:

Student A - fictional example: helped a new student find the room

Student B - fictional example: asked for help

[ADD FICTIONAL EXAMPLES ONLY]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

11. Conference prep one-pager

All grades

Ten minutes per family, and you have 24 families.

The prompt

I have parent conferences for [GRADE] [SUBJECT]. Each is [MINUTES] minutes.

From the notes below, build me a one-page card per student with: one strength with evidence, one growth area with evidence, one thing to ask the parent, and one thing the parent can do at home. Keep each card to what I can scan in 20 seconds.

NOTES:

[PASTE YOUR NOTES]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

12. Class newsletter from rough notes

K-2 · 3-5

Bullet points in, finished newsletter out.

The prompt

Turn these rough notes into a warm, scannable class newsletter for [GRADE] families for the week of [DATE].

Sections: what we learned, what is coming up, dates to remember, how to help at home. Keep it under 300 words, use headings, and write at a reading level any parent can follow.

NOTES:

[PASTE YOUR BULLET POINTS]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Differentiation

4 prompts

13. One task, three levels

All grades

Three entry points into the same lesson, with a shared learning objective.

The prompt

Take the task below for [GRADE] [SUBJECT] and give me three versions:

- Scaffolded: same thinking, more support (sentence starters, worked example, chunked steps)
- On-level: as written, tightened if needed
- Extension: same topic, genuinely harder thinking — not just more questions

All three must be able to run in the same room at the same time, and end with students able to share in one discussion.

TASK:

[PASTE YOUR TASK]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Fictional example input

Create three versions of this Grade 4 math task: compare $\frac{1}{2}$ and $\frac{3}{4}$ and explain which is larger. Keep the same fraction-comparison objective. Include a shared discussion question and an answer key.

Illustrative draft - not a recorded API execution

Supported task

Draw two equal-sized rectangles. Split each into four equal parts. Shade two parts in the first and three in the second. Complete: $\frac{1}{2} = \frac{__}{4}$. Therefore $__$ is larger because $__$.

Independent task

Compare $\frac{1}{2}$ and $\frac{3}{4}$. Draw a model or use equivalent fractions to explain your answer in two sentences.

Extension task

Find a fraction strictly between $\frac{1}{2}$ and $\frac{3}{4}$. Show why it belongs between them using equivalent fractions.

Shared discussion

Why must the wholes be the same size when we compare?

Answer key

$\frac{1}{2} = \frac{2}{4}$, so $\frac{3}{4}$ is larger. One extension answer is $\frac{5}{8}$ because $\frac{1}{2} = \frac{4}{8}$ and $\frac{3}{4} = \frac{6}{8}$. Check equal-sized wholes and equal partitions.

14. Rewrite a text to a lower reading level

3-5 · 6-8 · 9-12

Keep the ideas. Lose the barrier.

The prompt

Rewrite the passage below for [GRADE] students reading roughly [NUMBER] years below grade level.

Keep every key idea and all subject vocabulary — define the vocabulary in place rather than removing it. Shorten sentences, make the structure obvious, and add a heading every few paragraphs.

Then list the 5 words a student may still get stuck on, with a student-friendly definition each.

PASSAGE:

[PASTE THE TEXT]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

15. Supports for multilingual learners

All grades

Access to the lesson, not a different lesson.

The prompt

For the [GRADE] [SUBJECT] lesson below, give me supports for students still developing English.

I need: the 6 words that will block comprehension with a plain definition and a visual I could sketch, sentence frames for the discussion, a way for a student to show understanding without writing a paragraph, and one thing I should say differently while teaching.

Do not simplify the content or lower the expectation — only the language load.

LESSON:

[PASTE YOUR PLAN]

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

16. Real work for early finishers

All grades

Not a word search. Something that actually extends.

The prompt

Students finishing [TASK] early in [GRADE] [SUBJECT] need something that extends the same thinking, not filler.

Give me 5 options that: need no new instruction from me, take 5-15 minutes, use only what is already on their desk, and could be shared with the class in one sentence.

For each, say in one line what deeper thinking it demands.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Assessment

4 prompts

17. A quiz with an answer key and a diagnosis

3-5 · 6-8 · 9-12

Every wrong answer tells you something specific.

The prompt

Write a [NUMBER]-question quiz on [TOPIC] for [GRADE].

Mix recall, application, and one question that needs reasoning. For each question give me: the question, the answer, and — for each wrong option — what a student choosing it probably misunderstands.

Then tell me which 2 questions to look at first when I grade, to find out fastest who needs reteaching.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

18. A single-point rubric

All grades

One column of criteria. Faster to write, far faster to grade.

The prompt

Build a single-point rubric for [ASSIGNMENT] in [GRADE] [SUBJECT].

Format: a centre column stating what proficient looks like for each criterion, with blank columns either side for "needs work" and "exceeds" that I fill in per student. Use 4-5 criteria maximum, written in language a [GRADE] student can read and act on.

Then give me 3 feedback sentences per criterion that I can reuse.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

19. Exit tickets that actually sort the class

All grades

One question that separates 'got it' from 'nodded along'.

The prompt

Write 5 exit ticket questions for [TOPIC] in [GRADE] [SUBJECT].

Each must be answerable in under 3 minutes and must distinguish real understanding from surface repetition — a student who only copied the steps should get it wrong.

For each, tell me what a correct answer proves and what the most likely wrong answer tells me to reteach.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

20. Questions aimed at one misconception

All grades

You know exactly what they are getting wrong. Target it.

The prompt

My [GRADE] students are consistently making this mistake in [SUBJECT]: [DESCRIBE THE MISTAKE].

Give me 6 questions designed so that a student holding this misconception gets them wrong in a visible way, plus 2 where the misconception does not matter — so I can tell it apart from a general struggle.

Then give me the sequence of 3 questions I would ask one student, out loud, to walk them out of it.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Worksheets

2 prompts

21. A worksheet that ramps properly

K-2 · 3-5 · 6-8

Starts where they are, ends where you want them.

The prompt

Create a practice worksheet on [TOPIC] for [GRADE].

Structure it in four blocks: 2 warm-up items anyone can do, 5 core items building in difficulty, 2 items that combine this with [EARLIER TOPIC], and 1 challenge.

Include the answer key, and mark which single item is the "if they get this, they have it" question.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

22. A station rotation from one topic

K-2 · 3-5 · 6-8

Four stations, four different ways in, one period.

The prompt

Design 4 stations on [TOPIC] for [GRADE], [MINUTES] minutes each.

Each station must use a different mode — one hands-on, one reading, one talking, one writing — and must work without me standing there.

For each: the instruction card exactly as students read it, materials (nothing I have to buy), and what I check when I walk past.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Time & admin

3 prompts

23. The email to your admin

All grades

Professional, short, and it makes the ask clearly.

The prompt

Write an email to [ADMINISTRATOR ROLE] about [SITUATION].

I want: [WHAT YOU ACTUALLY WANT]. Tone: professional, brief, not apologetic and not confrontational. Lead with the ask, then the context, then what I have already done. Under 150 words.

Then a one-line version for a hallway conversation.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

24. Behaviour reset script

All grades

What to say when it goes wrong, prepared in advance.

The prompt

A [GRADE] student is [DESCRIBE THE BEHAVIOUR]. I want to reset this without a power struggle and without an audience.

Give me: what I say in the moment (under 15 words), what I say to them one-to-one afterwards, and three things NOT to say and why.

Focus on the behaviour and the repair, not on the student's character. This is a classroom conversation, not a diagnosis.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

25. Morning meeting for a whole week

K-2 · 3-5

Five days of openings, built around one thread.

The prompt

Plan 5 morning meetings for [GRADE], 10 minutes each, threaded around [THEME].

Each day: a greeting, a share prompt that a shy student can answer in one sentence, and a 2-minute activity. Build across the week so Friday connects back to Monday.

Keep the prompts about things students choose to share, never about home circumstances.

Use only supplied facts and fictional examples. Do not infer identity, pronouns, achievements or diagnoses. If key evidence is missing, ask instead of inventing it. Review all results before classroom use.

Project status and feedback

A larger Teacher AI Toolkit is in development, not yet validated for sale. These illustrative examples are not logged API executions or teacher-reviewed results. There is no guaranteed time saving or verified cross-tool compatibility. Share feedback through the project link below; never include student records.

[Project feedback](#) - do not include any student information.
